

EXPERT EYES ON YOUR DATA

YOUR LOCAL TEAM WITH INTERNATIONAL CAPABILITIES

Scope International (UK) Ltd is a Manchester-based full-service clinical research organisation. Drawing on our parent company Scope International AG's 15 year history of running clinical studies across Europe and USA, our mission is to support companies to bring their product to market safely. Over the years this has included product registration for drugs and drug device combinations in women's health, asthma, epilepsy, pain and anti-infectives.

SCOPE has long recognised that UK is a centre for innovation in the pharma, biotech and me-

dicinal technology fields; and due to the need to be closer to our sponsors and the patients we recruit, the company opened our UK offices in 2014. During the last two and a half years SCOPE has established our UK offices and built a team of Monitoring and Project Management staff in Bolton, Greater Manchester. The Office Director is a Clinical Research Professional with over fifteen years of managing and monitoring clinical studies. We offer the ability to manage our local UK and Eire projects and internationally in collaboration with a large multidisciplinary team distributed in different offices of the company.

Through our UK office we are able to offer tailored services to support every stage of your drug or device clinical development; from protocol design and reimbursement strategies through study site identification, initiation, monitoring and closeout; data management, statistical ana-

lysis and reporting. We work with a broad range of sponsors from spin-out and start-ups through to large corporates assisting with product concepts through to registration providing cost effective solutions at all stages in-between.
